Activities

Activities belong to Leads and can represent any type of activity that was performed on a Lead or its Contacts (e.g. Calls, Emails, Notes, etc.).

List or filter all activity types.

```
GET /activity/{?lead_id, user_id, user_id__in, contact_id, contact_id__in, _type, _type__in, date_created__gt, date_created__lt, _fields}
```

To list only a specific activity type (e.g., only `Call` or `LeadStatusChange`), use the other resources listed separately. When querying activities for a single lead (using the `lead_id` parameter), you can ask for multiple activity types using `_type__in`.

When listing `Custom Activities`, `_type` and `_type__in` can include Custom Activity Type ids (e.g. `actitype_1h5m6uHM9BZ0pwVhyRJb4Y`) to filter by a specific custom activity type or `Custom` to list custom activities of any type.

The following filtering parameters can only be used for listing activities on a single lead (using the `lead_id` parameter): `user_id`, `user_id__in`, `contact_id`, `contact_id__in`, `_type`, `_type__in`.

`thread_emails` parameter:

- (Default) when this parameter is not present, `Email` objects will be returned for each email message.
- A value of `true` will return `EmailThread` objects representing email conversations. Stripped-down version of `Email` objects will also be returned.
- A value of `only` will return `EmailThread` objects representing email conversations. `Email` objects will not be returned.
