Bulk Actions

Send As

The Send As feature allows a user to explicitly allow another user to send individual emails, bulk emails, and sequence emails as them.

Send As permission must be explicitly granted by the user that's allowing another user to send as them. This permission can be revoked by the allowing user at any time.

List all Send As Associations by allowing or allowed user.

GET /send_as/{?allowing_user_id, allowed_user_id}

A user only has access to associations they are involved in. This means that when using this endpoint, `allowing_user_id` or `allowed_user_id` must be equal to your user ID. If neither filter is provided, `allowing_user_id` is assumed by default.

Example Request/Response

Create a Send As Association.

POST /send_as/

The `allowing_user_id` must be equal to your user ID.

Example Request/Response

Delete a Send As Association by allowed user.

DELETE /send_as/{?allowing_user_id, allowed_user_id}

The `allowing_user_id` must be equal to your user ID.

Supply both the `allowing_user_id` and the `allowed_user_id` to delete an association by those users.

Example Request/Response

Retrieve a single Send As Association.

GET /send_as/{id}/

Example Request/Response

Delete a Send As Association by ID.

DELETE /send_as/{id}/

Example Request/Response

Edit Send As Associations in bulk.

POST /send_as/bulk/

You can allow and disallow many other users to send as you in a single command by supplying the user IDs you want to allow and disallow.

Once completed, this endpoint returns all existing associations where your user is the allowing user.

Example Request/Response
