Activity Custom Fields

List all the Activity Custom Fields for your organization.

GET /custom_field/activity/

Example Request/Response

Create a new Activity Custom Field.

POST /custom_field/activity/

Activity Custom Fields belong to Custom Activities, and have additional attributes:

- `custom_activity_type_id` – the ID of the Custom Activity Type this Field should belong to.
- `required` – whether the Field will be required to publish the activity.

Example Request/Response

Fetch Activity Custom Field's details.

GET /custom_field/activity/{id}/

Example Request/Response

Update an Activity Custom Field.

PUT /custom_field/activity/{custom_field_id}/

You can rename it, change whether it accepts multiple values or not, change the "required" flag, change whether editing its values is restricted to specific Roles, or update the options for a "choices" field type. The updated name will immediately appear in the Close UI and only valid values for the updated `type` will be returned by the Custom Activity API.

The `custom_activity_type_id` and `type` values cannot be changed.

Example Request/Response

Delete an Activity Custom Field.

DELETE /custom_field/activity/{custom_field_id}/

The field will immediately disappear from any Custom Activity API responses.

Example Request/Response
