Contact Custom Fields

List all the Contact Custom Fields for your organization.

GET /custom_field/contact/

Example Request/Response

Create a new Contact Custom Field.

POST /custom_field/contact/

Example Request/Response

Fetch Contact Custom Field's details.

GET /custom_field/contact/{id}/

Example Request/Response

Update a Contact Custom Field.

PUT /custom_field/contact/{custom_field_id}/

You can rename it, change its type, change whether it accepts multiple values or not, change whether editing its values is restricted to specific Roles, or update the options for a "choices" field type. The updated name will immediately appear in the Close UI and only valid values for the updated `type` will be returned by the Contact API.

Some of the type changes need to convert all of the existing values for a given Custom Field to the new type. When this is required, the response will include an additional `converting_to_type` field. When the conversion is done, `converting_to_type` will no longer be returned.

Example Request/Response

Delete a Contact Custom Field.

DELETE /custom_field/contact/{custom_field_id}/

The field will immediately disappear from any Contact API responses.

Example Request/Response
