SMS

List or filter all SMS activities.

`GET /activity/sms/{?lead_id, user_id, date_created__gt, date_created__lt}`

Get a list of matching SMS activities.

MMS messages are considered SMS messages with attachments. Attachments have identical fields to email attachments (`url`, `filename`, `size` and `content_type`), a `media_id` uniquely identifying an attachment, and if Close was able to generate a thumbnail, a `thumbnail_url` too.

Accessing `url` or `thumbnail_url` requires an authenticated session and leads to a temporarily signed S3 URL.

⌄ Example Request/Response

Create an SMS activity.

`POST /activity/sms/`

status must be one of the following:

- `inbox` to log an already received SMS.
- `draft` to create a draft SMS.
- `scheduled` to send an SMS at a scheduled date and time, which must be specified in the `date_scheduled` field.
- `outbox` to actually **send** an SMS. To delay SMS sending by a few seconds (to allow undo), specify `send_in` in seconds (must be less than 60).
- `sent` to log an already sent SMS.

Only drafts can be modified, and their status can be changed to `scheduled` (to send later) or `outbox` (to send immediately). Scheduled SMS, or SMS in outbox that weren't sent yet can be canceled by setting the status back to `draft`.

You have to provide a `local_phone` that will be used to send the SMS. The number you choose has to be associated with a Phone Number of type `internal`. See the Phone Numbers paragraph for more details.

A `template_id` referencing an SMS Template may be provided instead of `text` to automatically render that template and use the content as `text`.

⌄ Example Request/Response

Fetch a single SMS activity.

`GET /activity/sms/{id}/`

⌄ Example Request/Response

Update an SMS activity.

`PUT /activity/sms/{id}/`

This can be used to modify a draft or send it once the draft is complete.

To send an SMS immediately, you can update its `status` to `outbox`. To send it at a later time, change the `status` to `scheduled` and provide the desired date & time in the `date_scheduled` field.

⌄ Example Request/Response

Delete an SMS activity.

`DELETE /activity/sms/{id}/`

⌄ Example Request/Response
